Awesome Chocolates Sales Analysis Project

Tool Used : **MySQL Workbench**

Project Introduction

- **Awesome Chocolates Sales Analysis** is a MySQL-based project created to analyze chocolate sales and generate useful business insights.
- The project uses **4 tables** — **Sales, Products, People, and Geo** — connected through IDs such as PID, SPID, and GeoID.
- I used **SQL concepts** such as **JOINS, aggregate functions, WHERE, GROUP BY, ORDER BY, and LIMIT** to analyze sales, products, countries, regions, and salesperson performance.

Dataset:

- **4 relational tables** — Sales, Products, People, and Geo.
- Contains **sales transaction, product, salesperson, customer, and geographical data**.
- Includes multiple fields such as **Amount, Customers, Boxes, Product, Category, Country, Region, and Salesperson**.

Objectives

1. Analyze the **overall sales performance** of Awesome Chocolates.
2. Calculate **total sales, customers, and boxes sold**.
3. Identify the **top-performing products** based on total sales.
4. Analyze sales performance by **product category and size**.
5. Compare sales across different **countries and regions**.
6. Identify the **top-performing salespersons**.
7. Analyze **high-value sales transactions** using filtering conditions.
8. Apply **SQL concepts** such as JOINS, aggregate functions, WHERE, GROUP BY, ORDER BY, and LIMIT to generate business insights

ER Diagram

Key SQL Queries

Q1. Find the total sales amount generated by the company.

```
33 • SELECT SUM(amount) AS total_sales
34 FROM sales;
35
```

Output

Result Grid		Filter Row
	total_sales	
▶	43561546	

Q2. Find the total number of customers served

```
39 • SELECT SUM(customers) AS total_customers
40 FROM sales;
41
```

Output

	total_customers
▶	1232947

Q3. Find the total number of boxes sold.

```
45 • SELECT SUM(boxes) AS total_boxes_sold
46 FROM sales;
47
```

Output

	total_boxes_sold
▶	2901311

Q4. Find the average sales amount per transaction.

```
51 • SELECT AVG(amount) AS average_sales
52 FROM sales;
53
54
```

Output

	average_sales
▶	5718.9899

Q5.Display the top 10 highest sales transactions.

```
62 • SELECT *
63 FROM sales
64 ORDER BY amount DESC
65 LIMIT 10;
66
```

Output

	SPID	GeoID	PID	SaleDate	Amount	Customers	Boxes
▶	SP23	G4	P03	2021-02-12 00:00:00	27146	329	1939
	SP18	G5	P10	2021-04-22 00:00:00	25207	22	1483
	SP03	G5	P22	2021-06-02 00:00:00	24633	39	986
	SP18	G1	P11	2021-10-21 00:00:00	24451	472	1112
	SP18	G2	P16	2021-03-30 00:00:00	24367	272	3481
	SP24	G4	P01	2022-02-16 00:00:00	23912	211	1993
	SP17	G4	P08	2021-03-10 00:00:00	23268	80	1058

Q6.Find total sales for each product

```
70 • SELECT
71     PID,
72     SUM(amount) AS total_sales
73 FROM sales
74 GROUP BY PID;
75
```

Output

	PID	total_sales
▶	P01	1989078
	P02	1991836
	P03	2055627
	P04	2090242
	P05	1871751
	P06	1955975
	P07	1941562

Q7. Find the top 5 products based on total sales amount.

```
79 • SELECT
80     PID,
81     SUM(amount) AS total_sales
82 FROM sales
83 GROUP BY PID
84 ORDER BY total_sales DESC
85 LIMIT 5;
86
```

Output

Result Grid			Filter Rows:
	PID	total_sales	
▶	P11	2112502	
	P04	2090242	
	P03	2055627	
	P08	2023070	
	P16	2016707	

Q8. Find total boxes sold for each product category.

```
95 • SELECT
96     p.category,
97     SUM(s.bboxes) AS total_boxes_sold
98 FROM sales s
99 JOIN products p
100 ON s.PID = p.PID
101 GROUP BY p.category;
```

Output

	category	total_boxes_sold
▶	Bars	1435141
	Bites	848184
	Other	617986

Q9. Find which product generated the highest total sales.

```
106 • SELECT
107     PID,
108     SUM(amount) AS total_sales
109 FROM sales
110 GROUP BY PID
111 ORDER BY total_sales DESC
112 LIMIT 1;
```

Output

	PID	total_sales
▶	P11	2112502

Q10. Find which product generated the highest total sales.

```
117 • SELECT
118     p.size,
119     SUM(s.amount) AS total_sales
120 FROM sales s
121 JOIN products p
122     ON s.PID = p.PID
123 GROUP BY p.size;
```

Output

	size	total_sales
▶	LARGE	23948351
	SMALL	19613195

Conclusion

The Awesome Chocolates project helped me analyze sales data using MySQL and understand how SQL can be applied to real business data. By working with multiple related tables, I analyzed sales performance across products, categories, countries, regions, and salespersons. The project also strengthened my practical understanding of SQL concepts such as JOINS, aggregate functions, filtering, grouping, sorting, and limiting results.
